

AP7002

SOLID STEEL BASE

WATER DRAIN - Prevents water build-up inside the pipe.

CRIMPING POINTS - The solid base (internal) has a channel. Now all crimping points of the pipe are made exactly under this groove, locking the outer pipe to the antenna's solid base and preventing it from shifting.

EFFICIENCY - Poor contact is impossible because it is solid (greater efficiency in transmission and reception, better VSWR tuning).

SAFETY - Firmer whip (less sway, lower risk of accidents).

ANTI-THEFT SYSTEM - The same system used on the Aluminum Special Base
